

## CMPS 350 Project Phase 1 – WebApp UI Design and Implementation (15% of the course grade)

The project phase 1 submission is due by **8am Sunday 6<sup>th</sup> March 2022**. Demos during the same week.

### 1. Requirements

You are requested to design and implement بَصَائِر Web app for a **novel interactive** Tafsir using **Arabic** user interface. The project will be in collaboration with بصائر المعرفة القرآنية <https://quranok.com/> lead by [Prof. Abdulsalam Almajeedy](#). Tafsir will use سورة النساء as an example.

The key goal is the enable users to start from خريطة المحاور السورة to access the associated Quran verses and the associated 3 levels of Tafsir: الوجيز، الوسيط، و المفصل

More info @ <https://www.youtube.com/watch?v=nzN2O0CaTJU>

The unique characteristic of this Tafsir is

"يعتمد التفسير الموضوعي للقرآن على تدبر السورة وتقسيمها إلى محاور مترابطة، ينقسم كل محور بدوره إلى أقسام يمكن تقسيم كل قسم عند الحاجة إلى فصول، ويعتمد هذا التقسيم الدقيق على ترتيب الآيات دون قفز عليها كما هو حال التفسير الموضوعي التقليدي ويظهر ذلك مدى الإحكام المذهل لآيات القرآن الكريم".

Project goal:

- تيسير التدبر و الفهم والعمل بالقرآن الكريم و إبراز جمال و روعة و اعجاز الأسلوب القرآني
- تيسير حفظ القرآن الكريم باستخدام الروابط اللفظية والمعنوية والموضوعية
- قُرْآنٌ يُتْلَى لِبَنِي آدَمَ لَعَلَّهُمْ يَتَّقُونَ

The main بَصَائِر use cases are described Table 1.

Table 1. Use cases description

Use case	Brief description
1. Quran Navigator	<p>Navigate Quran enables to user to access a Surah, a page by number, the start of Juz جزء , or the start of ربع. In addition to the search by a word or part of a word.</p> <p>Some of kind of UI like this:</p> 
2. Quran Viewer	<p>Display Quran verses as requested by the user using the Quran Navigator. The viewer should display one page at time with the ability to navigate back and forth between pages.</p>
3. Verse Resources	<p>From the Quran Viewer the user can click on the Verse number <b>علامة الآية</b> to access the resources associated with the verse including:</p>  <p>عند ضغط كل آية يجب توفير العناصر الآتية:</p> <ul style="list-style-type: none"> <li>• <b>نص الآية</b> : نص الآية مكتوب بخط القرآن الكريم <a href="http://me-quran">me-quran</a> بشكل واضح لقراءة الآية.</li> <li>• <b>الاستماع للآية</b> : الاستماع للآية بأصوات مشاهير القراء . المصدر <a href="http://everyayah.com">everyayah.com</a></li> <li>• <b>معاني الكلمات</b> : معاني كلمات القرآن الكريم. <b>المصدر</b> : السراج في بيان غريب القرآن، محمد بن عبد العزيز الخضير</li> <li>• <b>تفسير الآية</b> : تفسير الآية التي تم إختيارها . <b>المصدر</b> : <b>المختصر في تفسير القرآن الكريم</b>، مركز تفسير للدراسات القرآنية و بصائر المعرفة القرآنية <a href="https://quranok.com/">https://quranok.com/</a></li> <li>• <b>تدبر الآية</b> : ويحتوي على <b>الوقفات التدبرية و اللمسات البيانية</b></li> <li>• <b>المتشابهات</b> : قائمة الآيات المتشابهة مع الآية الحالية</li> <li>• تصاميم فوائد قرآنية (<b>مثال</b>)</li> </ul>

	<p>The needed resources will be gradually provided / contributes by students in json format from sources such as <a href="https://tanzil.net/docs/home">https://tanzil.net/docs/home</a>, <a href="https://github.com/risan/quran-json">https://github.com/risan/quran-json</a>, <a href="https://github.com/quran/quran.com-api">https://github.com/quran/quran.com-api</a>, etc.</p>
<p>5. خريطة المحاور للسورة (أي الروابط الموضوعية)</p>	<ul style="list-style-type: none"> <li>Provide interactive خريطة المحاور للسورة with ability to view for each محور the associated أقسام (أي مقاطع).</li> </ul>  <ul style="list-style-type: none"> <li>For each مقطع view the associated ayat in the Quran Viewer Color highlight the ayat of the مقطع in the Quran Viewer and allow access to its summary and the مقطع associated resources such as video/audio link or graphical illustrations.</li> </ul> <p>المقطع الأول</p> <p>من الآية رقم (1) الى الآية رقم (5) عدد الآيات (5)</p> <p>هي أطول سورة في القرآن، وبدأت ببيان وظيفة القرآن، وأنه كتاب هداية وإرشاد، ثم تقسم الناس إلى ثلاثة أقسام مع ذكر بعض صفاتهم في 20 آية، فتحدثت الآيات (1-5) عن المؤمنين، والآيات (6، 7) عن الكافرين، والآيات (8-20) عن المنافقين، وبدأت بالقسم الأول: المؤمنون وصفاتهم، وفي مقدمتها الإيمان بالغيب، ثم بيان نجاحهم وفلاحهم.</p> <p>فيديو المقطع</p> <ul style="list-style-type: none"> <li>List the مقاطع Surah and provide the ability to navigate to a specific مقطع.</li> <li>From the hierarchy above allow access to the 3 levels of Tafsir: الوجيز، الوسيط، والمفصل The surah maps and tafsir content will be based on بصائر المعرفة القرآنية <a href="https://quranok.com/">https://quranok.com/</a> (Example of Tafsir سورة النساء will be used).</li> </ul>
<p>6. Quran quizzes</p>	<p>Quizzes based on the content delivered by the app. More details about this use case will be added to this document.</p>

## 2. Deliverables

Seek further clarification about the requirements/deliverables during the initial progress meeting with the instructor. Note that further important clarifications maybe modified/added to the project requirements.

### 1) Design the App Web UI and navigation.

You may design the UI wireframe (sketch) to decide the UI components and the layout either on paper or use a design tool such as <https://balsamiq.com/>

**During the weekly office hours, you are required to present and discuss your design with the instructor and get feedback.**

- 2) For each use case, **implement the app Web UI and navigation using HTML, CSS and JavaScript**. The pages should comply with Web user interface design best practices. Also remember that 'there is elegance in simplicity'.

Design and implement the app navigation to allow the user to navigate from one page to another in intuitive and user-friendly way to achieve the app use cases.

- 3) For each use case, **implement the client-side data access repositories** using JavaScript to read/write the app data from/to IndexedDB.
- 4) Create test data JSON files for the app entities.  
First test the implementation using a main function that displays the results to the console before using them in the UI.
- 5) Application design documentation including the Entities Class Diagram and the Repositories Class diagram.
- 6) Document the app testing using screen shots illustrating the results of testing.
- Every team member should submit a description of their project contribution. Every team member should demo their work and answer questions during the demo.
  - Push your implementation and documentation to your group GitHub repository as you make progress.

Note that this phase will be focused only **a fully working client-side implementation** using data stored in json files and local browser database. In phase 2 you will implement the server-side to move some of the computation and data management to the server-side.

### 3. Grading rubric

Criteria	%	Functionality*	Quality of the implementation
1) Design the App Web UI and navigation.	10		
2) Implement the app Web UI and navigation using HTML, CSS and JavaScript.	30		
3) Implement the client-side data access repositories to read/write the app data from/to IndexedDB.	40		
<b>4) Application Design:</b> Entities Class Diagram and Repositories Class diagram.	8		
5) Create test data JSON files for the app entities	6		
<b>6) Testing documentation</b> using screen shots illustrating the testing results. - Discussion of the project contribution of each team member.	6		
<b>Total</b>	100		
Copying and/or plagiarism or not being able to explain or answer questions about the implementation	- 100		

\* **Possible grading for functionality** - **Working** (get 70% of the assigned grade), **Not working** (lose 40% of assigned grade and **Not done** (get 0). The remaining grade is assigned to the quality of the implementation.

In case your implementation is not working then 40% of the grade will be lost and the remaining 60% will be determined based on of the code quality and how close your solution to the working implementation.

Solution quality also includes meaningful naming of identifiers (according to Android naming conventions), no redundant code, simple and efficient design, clean implementation without unnecessary files/code, use of comments where necessary, proper code formatting and indentation.

**Marks will be reduced** for code duplication, poor/inefficient coding practices, poor naming of identifiers, unclean/untidy submission, and **unnecessary complex/poor user interface design**.
